

How to connect the optical module with the cable

Article Overview

Use a fiber optic patch cable or an appropriate DAC/AOC cable that matches the module's connector type, fiber type, and wavelength.

Connector Type

Most modern SFP, SFP+, and QSFP modules use LC connectors, while SC connectors are common in legacy systems, and MPO/MTP connectors are used for high-density cabling . Ensure the cable's connector matches the module's port to avoid adapters and signal loss.

Fiber Type and Wavelength

- Multimode fiber (MMF): Typically OM3 or OM4, used for short-distance connections (up to 550 meters). Operates at 850 nm wavelength .
- Single-mode fiber (SMF): OS2 standard, used for long-distance connections (up to 120 km). Operates at 1310 nm or 1550 nm wavelength .
- WDM modules: Use single-mode fiber with different wavelengths for transmit and receive, often requiring paired modules . Never mix single-mode and multimode fibers, as this causes severe signal loss or link failure .

Cable Options

- Fiber Patch Cables: Standard duplex or simplex fiber cables with LC, SC, or ST connectors. Choose high-quality, low-loss cables to maintain signal integrity
