

How to get internet access via fiber optic cable

Article Overview

To access the internet via fiber optic cable, you need a fiber service provider, an Optical Network Terminal (ONT), and a compatible router to connect your devices.

Step 1: Check Fiber Availability

Before installation, confirm that fiber optic service is available in your area. Contact local ISPs or check their websites to see if your home or business is eligible. Fiber may already be installed underground or on utility poles, but in some areas, you may need to wait for network expansion .

Step 2: Professional Installation

Fiber internet typically requires a technician to install the line from the provider's network to your building. Installation can be done underground, via conduits, or overhead, depending on local infrastructure. The technician will determine the best route and install the Optical Network Terminal (ONT), which converts light signals from the fiber into data your devices can use .

Step 3: Connect Your Router

Once the ONT is installed:

- Use an Ethernet cable to connect the ONT to a compatible router (look for a WAN or SFP port labeled "ONT" or "Fiber")...
