

How to inspect a distribution box on site

Article Overview

Inspecting a distribution box on-site involves a combination of visual checks, electrical testing, and documentation to ensure safety and reliable operation.

Preparation and Safety

Before starting, ensure the power supply is safely isolated if intrusive inspection is required. Wear appropriate personal protective equipment (PPE), including insulated gloves and safety glasses. Familiarize yourself with the internal layout, electrical components, and operating parameters of the distribution box, especially for stainless steel or waterproof enclosures .

Visual Inspection

- Check for dust, debris, or moisture inside the enclosure .
- Inspect circuit breakers, switches, and terminals for signs of overheating, corrosion, or physical damage .
- Verify the tightness of fasteners, cable entries, and seals to maintain IP protection and prevent water ingress .
- Look for burn marks, discoloration, or loose wiring that may indicate electrical faults .
- Ensure labels, indicators, and meters are intact and readable .

Electrical Testing

- Test grounding continuity and resistance to ensure proper earthing
