

How to install metal mesh in a distribution box

Article Overview

Installing metal mesh in a distribution box requires precise measurement, cutting, and secure mounting to ensure safety, ventilation, and component protection.

Step 1: Prepare the Distribution Box

Before installing the mesh, ensure the distribution box is properly installed and meets safety standards. Choose a box with appropriate IP/NEMA ratings for your environment, and confirm it is mounted in a dry, accessible location with good ventilation, typically around 1.5 meters from the floor . Ensure all internal components like breakers, busbars, and terminal blocks are properly mounted and organized .

Step 2: Select and Measure the Metal Mesh

Choose a galvanized weld mesh or suitable metal mesh that fits the intended purpose inside the box, such as airflow protection or component separation . Measure the area where the mesh will be installed using a measuring tape to ensure a precise fit. Mark the dimensions on the mesh before cutting.

Step 3: Cut the Mesh

Use appropriate cutting tools based on mesh thickness:...
