

How to install network modules in a network cabinet

Article Overview

Installing network modules in a network cabinet requires careful preparation, proper grounding, correct module orientation, and secure fastening to ensure reliable operation and airflow.

Preparation and Safety

Before installing any network module, ensure the cabinet is properly positioned in a well-ventilated, dust-free area with easy access to power and network cabling . Gather all necessary tools, including screwdrivers, mounting screws, and ESD-preventive wrist straps. Always follow ESD precautions by grounding yourself to prevent damage to sensitive components . Remove any cables or pre-installed SFP/SFP+ modules from the module slot before installation to avoid interface errors .

Installing the Network Module

- **Remove the Protective Packaging:** Take the network module out of its packaging and remove any blank modules from the cabinet slot .
- **Check Orientation:** Verify the correct orientation of the module. Incorrect insertion can damage the module or the switch .
- **Insert the Module:** Position the module face up and slide it into the slot until the back of the module faceplate is flush with the cabinet or switch faceplate .
- **Secure the Module:** Fasten the captive screws or jackscrews to hold the module firmly in place. Some modules, like the C3850-NM-8-10G, require tightening the jackscrew while gently pushing the module into the slot
