

How to install the fiber optic cable junction box plug

Article Overview

To insert a fiber optic cable plug into a junction box, carefully prepare the cable, route it through the box, and connect it to the designated port while avoiding stress or damage to the fiber.

Step 1: Prepare the Fiber Optic Cable

Before insertion, remove the outer sheath of the fiber optic cable carefully to expose the inner fibers without damaging them. Use fiber optic cutting pliers to trim the cable to the required length and clean the fiber end to ensure a smooth, flat surface for connection .

Step 2: Introduce the Cable into the Junction Box

Insert the prepared fiber optic cable through the cable inlet or grommet of the junction box. Ensure the cable is secured in place using the provided clamps or grommets to prevent movement and strain on the fiber .

Step 3: Connect the Fiber Optic Plug

Open the connector cover of the junction box and locate the corresponding port for your fiber optic plug. Gently insert the plug into the port until it clicks or fits snugly, following the manufacturer's instructions. Avoid bending the fiber sharply or applying excessive force, as this can damage the delicate fiber core
