

How to make a terminal box

LoRawan outdoor base station

Article Overview

A terminal box is made by selecting appropriate materials, constructing a protective casing, installing terminals, and securely connecting wires for organized and safe electrical distribution.

Materials and Tools

- **Box Material:** Choose insulating materials like plastic (PVC, PA), metal (aluminum, galvanized steel), or composites depending on durability and environmental exposure .
- **Terminals/Connectors:** Use conductive metals such as copper, brass, or tin-plated copper. Types include screw, spring, plug-in, or ring terminals .
- **Tools:** Wire stripping pliers, crimping pliers, diagonal pliers, multimeter, insulation tape, and heat shrink tubing .

Construction Steps

- **Design the Box:** Determine size, shape, and features like waterproofing or fire resistance based on application requirements .
- **Cut and Shape Material:** Use CNC machines, laser cutters, stamping, or molding to form the box. Metal boxes may require bending or welding .
- **Surface Treatment:** Apply powder coating, galvanizing, or UV-resistant coatings to protect against corrosion and environmental damage .
- **Install Terminals:** Mount terminal blocks inside the box. DIN rail-mounted terminals can simplify assembly and allow modular component placement .
- **Wire Preparation:** Strip wires to the correct length, crimp them into terminals, and label each wire for easy identification
