

How to organize the wires in the distribution box

Article Overview

Organize wires by grouping, labeling, and routing neatly to ensure safety, accessibility, and professional appearance.

Plan and Prepare

Before starting, turn off all power and ensure the distribution box is accessible and properly rated for your environment (indoor/outdoor, load capacity, IP/NEMA rating) . Identify the main switch, RCD, busbars, and MCB positions to plan wire paths efficiently .

Grouping and Routing Wires

- Separate wires by type: group hots, neutrals, and grounds separately .
- Layer wires: bend wires at right angles to buses or breakers and install in layers to conserve space .
- Use cable ties or channels to keep wires in place and prevent crossing .
- Route cables from one direction (usually from above) to simplify entry and reduce congestion .

Labeling

- Label each cable at both ends with a permanent marker indicating the circuit it serves (e.g., "Kitchen Lights," "Bath B")
