

How to replace the fiber optic cable in a router

Article Overview

Replacing a fiber optic cable involves safely disconnecting the old cable, connecting it to the Optical Network Terminal (ONT), linking the ONT to your router via Ethernet, and testing the connection.

Step 1: Gather Necessary Equipment

Before starting, ensure you have:

- Fiber optic cable (SC/APC or SC/UPC connectors)
- Optical Network Terminal (ONT) provided by your ISP
- Ethernet cable to connect the ONT to your router
- Router compatible with fiber input (SFP or WAN port labeled "ONT" or "Fiber")
- Safety gear: gloves and eye protection to prevent fiber splinters or exposure to laser light .

Step 2: Disconnect the Old Fiber Cable

- Power off your router and ONT.
- Carefully unplug the existing fiber optic cable from the ONT or wall outlet. Avoid bending or twisting the cable, as fiber strands are delicate .
- Inspect the connectors for damage; replace the cable if necessary.

Step 3: Connect the New Fiber Cable...
