

How to set up a Huawei black fiber optic router

Article Overview

You can set up your Huawei black fiber optic router by connecting it to your internet source, accessing the router's management page or AI Life app, and following the setup wizard to configure Wi-Fi, passwords, and network settings.

Step 1: Physical Connections

- Connect an Ethernet cable from the WAN port of your router to the LAN port of your fiber-optic modem or internet source. If your router has self-adaptive ports, you do not need to distinguish between WAN and LAN ports .
- Connect your router to a power source.
- Connect your computer or phone to the router:
- For a computer, use an Ethernet cable to a LAN port or connect via the default Wi-Fi network (check the nameplate at the bottom of the router; it is usually password-free initially).
- For a phone, connect to the default Wi-Fi network and open the AI Life app .

Step 2: Access the Router Configuration

- Via computer: Open a web browser and enter the router's default IP address (commonly 192.168.1.1 or check the label on the router) to access the web-based management page .
- Via phone: Open the AI Life app, tap CONFIGURE, then NEXT, and select GET STARTED. If no prompt appears, tap the Add button and choose Create a Wi-Fi network
