

# How to set up a MAC address and router for a telecom fiber optic connection

## Article Overview

To set up a fiber optic connection, connect the ONT/modem to your router, configure the MAC address if required, and enter your ISP credentials for PPPoE or DHCP access.

### Step 1: Connect the Fiber Optic Modem (ONT) to Your Router

- Locate the fiber optic wall outlet where your ISP's fiber line enters your home .
- Connect the fiber optic cable from the wall outlet to the ONT/modem using the appropriate connector (SC/APC or SC/UPC), .
- Power on the ONT and wait 2-5 minutes for the status lights to stabilize .
- Use an Ethernet cable to connect the ONT's LAN port to your router's WAN port .
- Power on the router and wait for the indicator lights to confirm a connection .

### Step 2: Configure the MAC Address (if required by ISP)

Some ISPs register the MAC address of the first device connected. If your router is new or replaced, you may need to clone the MAC address of your previous device or computer . Steps include:

- Access the router's web admin interface (usually via 192.168.1.1) and log in .
- Navigate to Setup > Advanced > MAC Address Clone or a similar menu .
- Enter the MAC address of your previous device or computer manually, or use the router's option to use client MAC address .
- Save the settings and reboot the router to apply changes ....
