

How to set up a router when connected to a 100m fiber optic cable

Article Overview

To set up a router with a 100m fiber optic cable, connect the fiber to an ONT, link the ONT to your router via Ethernet, and configure the router using your ISP credentials.

Step 1: Prepare Your Equipment

- Optical Network Terminal (ONT): Most fiber connections require an ONT provided by your ISP, which converts optical signals into electrical signals your router can use .
- Fiber-Ready Router: Ensure your router supports gigabit speeds or higher to fully utilize fiber performance .
- Cables: Use a high-quality fiber optic cable (SC/APC or SC/UPC connectors) and a Cat6a or higher Ethernet cable to connect the ONT to the router .

Step 2: Connect the Fiber Optic Cable

- Locate the fiber wall outlet where the ISP's fiber line enters your home.
- Plug one end of the fiber optic cable into the wall outlet and the other into the ONT's designated port .
- Power on the ONT and wait 2-5 minutes for the status lights to stabilize .

Step 3: Connect the Router

- Use an Ethernet cable to connect the ONT's LAN port to the WAN port on your router
