

How to view core switch parameters

Article Overview

You can view core switch parameters using the switch's CLI commands in privileged EXEC mode to check interfaces, VLANs, forwarding rates, QoS, redundancy, and other operational metrics.

Accessing the Switch

- Connect to the switch via console, SSH, or Telnet.
- Enter privileged EXEC mode by typing enable and providing the password if required .

Viewing Core Switch Parameters

1. Interface and Port Status

- Use show interfaces to display all interfaces, their operational status, and errors.
- For a specific interface: show interface gigabitEthernet 1/0/1 .

2. VLAN and MAC Table

- show vlan brief lists all VLANs and their associated ports.
- show mac address-table displays MAC addresses learned on each port.

3. Forwarding Rate and Performance

- Core switches handle high traffic; check forwarding capacity using show processes cpu and show memory to monitor load....
