

How to view the MAC addresses of VLANs connected to a switch

Overview

The command to view the MAC addresses associated with each switch port on a Cisco switch is `show mac address-table`. The `show mac address-table` command lists all MAC addresses learned by the switch, along with the corresponding VLAN, port, and address type (dynamic or static). Let's understand the step by step process under different scenarios. At times, network and IT admins are faced with the challenge to find out which device is connected to which port of the catalyst Switch or. I've tried using the following command sequence to locate the devices down to the port on the specific switch but I'm usually pointed to an uplink port. Is there a different command sequence that I could use that would help me locate these APs when multiple. To display VLAN information, use the `show vlan` command in privileged EXEC mode. `show vlan [brief | id vlan-id | name name | ifindex] brief` (Optional) Displays only a single line for each VLAN, naming the VLAN, status, and ports. We can find the mac. When performing troubleshooting or maintenance tasks on an enterprise network, it is sometimes necessary to identify the MAC address of particular devices (hosts, other switches, other network devices) that are connected to the network. Why Is MAC Lookup Important?

It's the.
