

How to wire a 6-circuit distribution box

Article Overview

A 6-circuit distribution box should be wired with proper breaker arrangement, correct wire sizing, color-coded connections, and safety devices like RCCBs and MCBs.

Material Preparation

Before starting, gather all necessary components: the distribution box, main MCB, 6 branch MCBs, RCCB, wires, cable ties, and tools. Ensure all devices are UL/CE-certified and rated for the intended load .

Box Placement and Layout

Install the box in a dry, accessible location at a convenient height (~1.5m). Arrange the main MCB on the left, branch MCBs in sequence from left to right, and reserve space for future expansion if needed . Ensure proper ventilation and secure mounting.

Wire Specifications and Color Coding

- Phase wires: Use 2.5mm² for lighting and sockets; 4mm² for high-load circuits like air conditioning .
- Neutral wire: Blue
- Phase wires: A-phase yellow, B-phase green, C-phase red (for three-phase systems)
- Earth wire: Green/yellow striped
- Ensure wires are insulated and rated for the voltage (typically 230V AC for single-phase domestic systems),
