

India Figure-8 Fiber Optic Cable Single Mode

Article Overview

Single-mode Figure-8 fiber optic cables in India are designed for aerial deployment, offering high tensile strength, environmental resistance, and flexible fiber counts for local and long-distance networks.

Overview

Single-mode Figure-8 fiber optic cables are engineered for aerial self-supporting installations, typically between poles or buildings. The "Figure-8" design integrates a messenger wire alongside the fiber core, providing mechanical support and reducing sag, making it ideal for hilly or challenging terrains. These cables are immune to electromagnetic interference due to their all-dielectric construction and are suitable for outdoor environments with UV protection and moisture barriers.

Technical Specifications

- Fiber Type: Single-mode (G.652.D, G.657.A1/A2)
- Fiber Count: Ranges from 2 to 288 fibers, commonly available in 4, 6, 8, 12, and 16 cores
- Core/Cladding Diameter: Typically 8–10.5 μm core, 125 μm cladding
- Cable Structure: Loose tube style with steel or FRP strength members, optional ripcords, anti-rodent coatings, and wet/dry core constructions
- Jacket Material: PE (Polyethylene) or LSZH (Low Smoke Zero Halogen) for weather resistance...
