

Installed household electrical distribution box

Article Overview

A home-installed electrical distribution box safely distributes electricity to all circuits in a building while protecting people and devices from electrical hazards.

What is a Distribution Box?

A distribution box, also called a breaker box, consumer unit, or DB box, is the central hub of a home's electrical system. It receives power from the main supply and divides it into separate circuits, each protected by circuit breakers or fuses to prevent overloads and short circuits . Modern boxes may also include residual current devices (RCDs) for personal protection, surge protection, smart modules, and energy monitoring units .

Key Components

- **Main Switch/Breaker:** Controls the entire electrical supply and allows complete disconnection during emergencies or maintenance .
- **Circuit Breakers:** Automatically interrupt power to individual circuits in case of overcurrent .
- **Residual Current Devices (RCDs/RCBOs):** Protect against electric shock by detecting leakage currents .
- **Bus Bars:** Conduct electricity to multiple circuits efficiently .
- **Optional Smart Modules:** Enable energy monitoring, remote control, and integration with home automation systems
