

Interoperability of optical ports on switches from different manufacturers

Overview

Q: Can two optical modules from different brands/suppliers be connected to each other?

A: If the wavelength, speed, and fiber type of the module are the same and operate normally on the original switch, two different brands of optical modules can be interconnected. 1, Same wavelength In a fiber optic link, data is transmitted from. How to Ensure Interoperability Between Two Optical Transceivers?

When it comes to the connection between two fiber optic transceivers, the following four factors should be taken into considerations: wavelength, speed, fiber type, and the connection to switches. Instead of being standardized by official standards, SFP is specified by MSA. However, in practical applications, the interoperability and compatibility issues of transceivers may directly affect.
