

Iron Plate Fixed Distribution Box

Article Overview

An Iron Plate Fixed Distribution Box is a durable electrical enclosure used to safely distribute power to multiple circuits, typically made of malleable iron and designed for fixed installation with rigid metal conduits.

Overview

An Iron Plate Fixed Distribution Box serves as a central point for routing electrical power from the main supply to various circuits within a building or industrial site. It is constructed from malleable iron or cast iron, providing high mechanical strength, durability, and resistance to impact, making it suitable for harsh environments and industrial applications. These boxes are often used in commercial, industrial, and mining installations where robust protection is required.

Key Features

- **Material:** Malleable iron or cast iron, offering superior durability compared to plastic or sheet metal boxes.
- **Mounting:** Fixed installation, either flush-mounted or surface-mounted, depending on the design and site requirements.
- **Conduit Compatibility:** Designed for use with threaded rigid metal conduits (RMC), ensuring secure and safe wiring connections.
- **Grounding:** Includes internal ground screws for proper earthing and safety compliance.
- **Gang Options:** Available in 1-gang, 2-gang, or multi-gang configurations to accommodate different numbers of circuits
