

LTE optical module transceiver

Overview

Optical modules enable high-speed, low-latency links across 5G fronthaul, midhaul, and backhaul. Optical modules, also known as optical transceivers, are essential components that convert electrical signals to optical signals and vice versa. They form the backbone of long-distance, high-capacity data transport in modern telecom networks. The RF family/Standard is Bluetooth, Cellular, General ISM, GPS, Navigation, SiBeam, WiFi, and 802.4 with frequency ranging from 70MHz to 65GHz. If you're dealing with data centers, telecommunications, or AI networking, grasping the key parameters of an optical. Huawei eKit offers a comprehensive series of pluggable optical modules in the Huawei eKit portfolio. The wide variety of modules gives you flexible and plug-and-play options for all types of interfaces.
