

Latvian Fiber Optic Cable Strippers

Article Overview

Fiber optic cable strippers in Latvia include mechanical, thermal, and automated tools suitable for various fiber diameters and coatings, with local suppliers like YE Latvia and BK Latvia offering professional-grade options.

Types of Fiber Optic Strippers

Mechanical Strippers: These are handheld tools designed to remove coatings from optical fibers without damaging the glass. They are ideal for standard telecommunication fibers (125 μm cladding, 250 μm coating) and can also handle specialty fibers with thinner coatings or tight buffers (e.g., 900 μm). Mechanical strippers often allow precise adjustment for circular or longitudinal cuts, making them suitable for both end stripping and window stripping operations.

Thermal Strippers: These use controlled heat to soften the fiber coating, allowing easy removal with minimal force. They are particularly useful for field applications where consistent stripping quality is required. Examples include battery-powered handheld units like AFL Precision Strip, which provide fast, precise stripping with low risk of fiber damage.

Automated Stripping Units: These machines are designed for high-volume or specialized applications, such as window stripping or medical fiber preparation. They often eliminate the need for chemicals and provide adjustable settings for temperature and time, ensuring consistent results.
