

# Method for installing multiple distribution boxes side by side

## Article Overview

Multiple distribution boxes can be installed side by side by ensuring proper spacing, alignment, ventilation, and independent wiring for safety and maintenance.

### Placement and Alignment

When installing multiple distribution boxes, choose a dry, accessible location with good ventilation and away from water, flammable, or corrosive substances . Align the boxes horizontally or vertically on a stable surface, ensuring they are level and securely fastened with expansion bolts or screws . Leave adequate space between boxes for heat dissipation, maintenance, and future expansion; typically, a few centimeters between enclosures is recommended .

### Electrical Enclosures

Select enclosures with appropriate IP or NEMA ratings based on indoor or outdoor use. For outdoor installations, use IP66 or NEMA 4 rated boxes to protect against water and dust . Ensure the enclosures are strong enough to support the internal components and withstand environmental conditions.

### Wiring and Circuit Management

Each distribution box should have independent circuit breakers and properly terminated wires: line to line, neutral to neutral, and ground to ground . Use neat ca...
