

Methods for connecting fiber optic broadband to a router

Article Overview

To connect fiber optic broadband to a router, you need an Optical Network Terminal (ONT) to convert the fiber signal, then link it to your router via an Ethernet cable.

Required Equipment

- Optical Network Terminal (ONT): This device, usually provided by your ISP, converts the incoming fiber optic light signals into electrical signals that your router can use .
- Fiber optic cable: Typically a thin, yellow cable with SC/APC or SC/UPC connectors .
- Router: Ensure it has a WAN or SFP port compatible with fiber connections .
- Ethernet cable (Cat6a or higher recommended): Connects the ONT to the router .

Step-by-Step Connection

- Install the ONT:
 - Locate the fiber wall outlet where the ISP's fiber line enters your home.
 - Connect the fiber optic cable from the wall outlet to the ONT's optical port, handling the connector carefully to avoid dirt or damage .
 - Power on the ONT and wait for the status lights to stabilize, indicating a successful connection to the ISP network .
- Connect the ONT to the Router:
 - Use an Ethernet cable to link the ONT's LAN/Ethernet port to the router's WAN port .
 - Power on the router and wait for the indicator lights to confirm a successful connection
