

Mobile fiber optic connection to TP-Link router

Article Overview

You can connect your TP-Link router to a fiber optic internet line by linking it through an ONT or SFP module, then configuring the router via its web interface or Tether app.

Step 1: Prepare Your Equipment

- Fiber optic line: Ensure the fiber cable from your ISP is active.
- Optical Network Terminal (ONT): Most ISPs provide an ONT that converts the fiber signal to Ethernet .
- TP-Link router: Confirm it supports fiber connections, either via a WAN port or SFP/SFP+ slot .
- Ethernet cable: To connect the ONT to the router.

Step 2: Connect the Hardware

- Fiber to ONT: Plug the fiber optic cable into the ONT's designated port .
- Power ONT: Connect the ONT to power and wait 2-5 minutes for the status lights to stabilize .
- ONT to Router: Use an Ethernet cable to connect the ONT's LAN port to the TP-Link router's WAN port .
- Power Router: Connect the router to power and turn it on. If using a router with an SFP/SFP+ port, insert the ISP-approved transceiver and connect the fiber directly, ensuring the transceiver is authenticated by your ISP
