

Modified fiber optic router settings

Article Overview

You can modify your fiber optic router settings by accessing the router's admin panel, entering ISP credentials, and customizing Wi-Fi and security options for optimal performance.

Accessing the Router Interface

- Connect your router to the ONT (Optical Network Terminal) using an Ethernet cable from the ONT's LAN port to the router's WAN port .
- Power on the router and wait for the indicator lights to stabilize.
- Open a web browser and enter the router's IP address (commonly 192.168.1.1 or 10.0.0.2) to access the admin panel .
- Log in using the default credentials (often admin/admin) or the password provided with your router .

Configuring Internet Connection

- Connection Type: Navigate to the WAN or Internet settings. Select the connection type specified by your ISP: PPPoE, DHCP, or Static IP .
- PPPoE: Enter the username and password provided by your ISP to authenticate the connection .
- Static IP: Input the IP address, subnet mask, gateway, and DNS information supplied by your ISP .
- VLAN Settings: If your ISP requires a VLAN ID, enable the VLAN option and enter the ID .
- Save and Apply: Confirm the settings and test the internet connection....
