

Monitoring of Access Switches

Overview

Use Automated switch port mapping, PoE management, Configuration management, and pre-configured SNMP templates to monitor your switches, firewalls, and access points. Network switches are the quiet workhorses of every modern IT environment. They route every packet, connect every device, and ultimately determine whether users experience fast, reliable applications or slow, unstable ones. But despite being so foundational, switches are often the least monitored. Network switch monitoring means keeping a close eye on how your switches are performing in real time, from their availability to traffic flow and overall health. The goal?

Catch issues before they snowball into outages or degraded network performance. Easily analyze which applications are. Are you looking for more visibility and control over your switches, firewalls, and access points?

Domotz can help! We offer: With a centralized and easy-to-use interface, Domotz simplifies network monitoring and provides MSPs and IT professionals with powerful software to increase operational. Network switches silently orchestrate the flow of data, enabling access to critical applications, seamless communications, and rapid file transfers.
