

Multi-functional optical power meter network cable

Article Overview

Multi-functional optical power meters like the NOYafa NF-8508, NF-859GT, and NF-8518 combine fiber optic testing, Ethernet cable diagnostics, and PoE verification in a single portable device.

Key Features

1. Optical Power Measurement: These devices include high-precision optical power meters (OPM) capable of measuring multiple wavelengths, typically ranging from 850nm to 1650nm, with power detection from -70 dBm to +10 dBm, allowing accurate assessment of fiber optic signal strength and attenuation . 2. Cable Testing and Mapping: They support wire mapping, continuity checks, and crimp testing for RJ45, RJ11, CAT5e, CAT6, and fiber optic cables. This helps identify shorts, opens, miswires, and split pairs quickly . 3. Visual Fault Location (VFL): Integrated VFL emits a visible laser (typically 10mW at 650nm) to locate breaks, bends, or faults in fiber optic cables, reducing troubleshooting time . 4. PoE Testing: Devices can detect Power over Ethernet (PoE) status, voltage, polarity, and compliance with IEEE 802.3af/at standards, ensuring connected devices receive proper power . 5. Cable Length Measurement: They measure cable lengths accurately, ranging from 2.5m to 200m, which is useful for structured cabling and installation verification . 6. Port Identification and Hub Blinking: These testers can locate active network ports, display speed, duplex, and negotiation settings, and blink hub/switch ports for easy identification . 7. Safety and Convenience: Non-contact voltage (NCV) detection ensures safe operation, while built-in LED lighting and rechargeable lithium batterie...
