

New Door-to-Door Shipping for Modular Data Centers

Article Overview

Prefabricated modular data centers can now be shipped fully assembled directly to deployment sites, enabling rapid, scalable, and high-density AI-ready infrastructure.

Overview of Modular Data Centers

Modular data centers are prefabricated, self-contained units that integrate power, cooling, and IT infrastructure into a single enclosure, often resembling a shipping container . These units are designed to be factory-built, pre-tested, and ready-to-run, allowing organizations to deploy compute resources quickly at edge locations, urban sites, or remote areas . They support high-density workloads, including AI clusters, with racks capable of handling hundreds of kilowatts to multiple megawatts of compute power .

Door-to-Door Shipping Advantages

- **Rapid Deployment:** Factory-built modules reduce onsite construction time by up to 50%, allowing organizations to deploy data centers within days rather than months .
- **Scalability:** Modular units can be clustered or expanded incrementally, supporting a “pay-as-you-grow” strategy for capacity planning .
- **High-Density Support:** Pre-configured racks, liquid cooling, and hot-aisle containment enable extreme power densities, often exceeding 1MW per pod .
- **Reduced Onsite Labor:** Modules arrive pre-assembled with integrated cabling, power distribution, and cooling systems, minimizing the need for complex onsite installation
