

Norwegian Steel Cable Tray Production

Article Overview

Norway produces steel cable trays primarily through specialized manufacturers like Øglænd System AS, offering both new and sustainably reused steel products for industrial and infrastructure applications.

Key Manufacturers and Production

Øglænd System AS, established in 1977 and located in Kleppe, near Stavanger, is Norway's main production plant for multidiscipline support systems, including steel cable trays and ladders. Their production serves sectors such as oil & gas, shipbuilding, infrastructure, wind energy, and marine farming, focusing on both onshore and offshore applications. Cable trays are manufactured in stainless steel, galvanized steel, aluminum, and composite materials to meet project-specific requirements. Staaltro is another notable player emphasizing sustainability. They source steel components from demolition and rehabilitation projects across Norway, carefully dismantle, inspect, test, and certify them for reuse. This approach allows the sale of ready-to-use, reused steel cable trays alongside new products, with full documentation and CO₂ savings, supporting environmentally responsible construction practices.

Product Features

Norwegian steel cable trays are designed for high load-bearing capacity, corrosion resistance, and flexibility. They come in various heights and widths, with slot patterns for efficient cable positioning and easy installation of fixings like clamps and ties. Accessories and fittings allow compact and stable configurations for diverse equipm...
