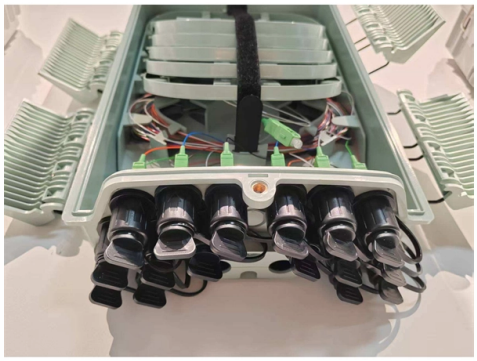
OPGW Optical Cable Model Description



Article Overview

OPGW cables are classified by structure, fiber count, and mechanical design, with model codes like OPGW-B1, OPGW-B2, and OPGW-D representing different configurations and performance characteristics.

Common OPGW Cable Models and Structures

OPGW cables are designed to combine grounding and optical communication in a single overhead conductor. The models are typically identified using a structured code format: OPGW-XX -YY (ZZ;AA), where the letters and numbers indicate the cable structure, fiber count, and optional features ( ).

Typical Structure Codes

• B1: Standard central loose tube with single or multiple layers of aluminum or aluminum-clad steel wires, suitable for moderate spans and environmental conditions ( ).
• B2: Enhanced mechanical strength with additional layers of aluminum-clad steel, designed for longer spans or higher mechanical stress ( ).
• D: Special asymmetric or customized designs for project-specific requirements, including high fiber counts or unique environmental conditions ( ).

Fiber Count Variations

• OPGW cables can range from 6 to over 48 fibers, depending on the application and communication requirements ( )....
