

Opening for Lighting Distribution Box

Article Overview

Lighting distribution boxes feature user-accessible openings for wiring, maintenance, and installation, typically via removable panels or doors with clearly marked compartments.

Access and Wiring Compartment

Lighting distribution boxes are designed with spacious wiring compartments that can be accessed by removing a single captive screw or panel, allowing electricians to safely connect and manage circuits . Multiple cable entry points provide flexibility for routing conductors, and in-line terminals are clearly labeled to accept various conductor sizes, such as 3 x 2.5mm², 2 x 4mm², or 1 x 6mm² . Removable metal plates inside the box hold electrical accessories and must be reliably grounded to prevent electric shock .

Safety and Compliance

Openings in the distribution box must allow safe operation and maintenance, with at least 0.8 meters of clearance in front of the box in shafts or confined spaces . Doors or panels should display a circuit system diagram and clearly mark circuit names, especially when multiple power levels (AC, DC) are present . This ensures proper identification and reduces the risk of errors during maintenance.

Installation Considerations

When installing a lighting distribution box, the spacing of internal components must...
