

Optical Splitter ATB

Overview

An access terminal box (ATB) is used to connect drop cables and passive ONU devices. It is installed on indoor walls to provide fiber sockets. The ATB3101 supports fusion splicing, mechanical splicing, and FA connectors. FAT-10A fiber distribution box can connect the drop cable with feeder cable as the termination point in the Fttx network, which is cable to meet at least 8 & 9 users' requirements. The fiber splicing, splitting, distribution can be done in this box, and meanwhile it provides solid. The HUAWEI IFDN (Indoor Fiber Distribution Network) Fiber Splitter & ATB products provide high-speed, reliable, and economical fiber connection for indoor networks. Their passive optical fiber splitting technology, light and elegant bodies allow them to be flexibly deployed in various locations.
