

Photovoltaic combiner box installation cost

Article Overview

The installation cost of a PV combiner box typically ranges from \$200 to \$1,000 per unit, depending on capacity, features, and whether it is pre-wired or custom-built.

Cost Breakdown

Unit Price: Basic PV combiner boxes for residential systems generally cost between \$200 and \$500, while advanced commercial or utility-scale units with monitoring, surge protection, and high-capacity fusing can reach \$800 to \$1,000 or more per box. Pre-wired boxes are more expensive upfront (20–40% higher) but reduce on-site labor and installation time. Custom boxes may be more cost-effective for large-scale projects due to precise component selection and scalability.

Installation Labor: Professional installation can reduce wiring errors and improve safety. Pre-wired boxes can cut installation time by 50–70%, translating to labor savings of 30–40% compared to field-wired units. Labor costs vary by region but typically add \$100–\$300 per box for residential setups, with higher costs for commercial or rooftop installations requiring specialized mounting and weatherproofing.

Additional Costs: Optional monitoring systems, surge protection devices, and IEC/UL certification can increase the total cost. For commercial projects, careful thermal derating and high-quality fuses may add 10–20% to material costs but improve long-term reliability and reduce maintenance expenses.
