

Phy optical module

Overview

Broadcom's Optical Module PHY portfolio spans multiple technology nodes — 16nm, 7nm and now 5nm, with data rates from 100 Gbs to 1. Comprising five flagship platforms, Centenario, Jesko, Portofino, Gemera, and Cygnus, Broadcom's DSP PAM-4 portfolio covers 100G, 400G, 800G, and 1.6T PMDs. PHY (Physical Layer Chip) and optical modules are two key components of communication systems, operating at different stages of the network stack while serving distinct roles. They are widely used in Ethernet standards, data centers, telecom equipment, and various industrial networks. They are available in the industry's smallest footprint and consume up to 40%. Need to layout a board to connect to an optical PHY transceiver?

Here are some high speed design aspects you'll need to consider. What Is the Ethernet MAC?
