

Price of Fiber Optic Cable Strand

Article Overview

A single fiber optic cable strand typically costs between \$0.09 and \$6 per foot, depending on type, strand count, and purchase method.

Fiber optic cable pricing varies widely based on fiber type, strand count, and application. For single-mode fiber, which is suitable for long-distance, high-bandwidth applications, the cost per foot ranges from \$0.10 to \$0.50 for the cable itself, while multimode fiber, used for shorter distances, costs around \$0.30 to \$1.00 per foot. Higher strand counts increase the price proportionally; for example, a 12-strand cable costs about \$0.50 per foot, whereas a 24-strand cable can reach \$1.00 per foot. Bulk wholesale purchases can reduce costs to \$0.09–\$1.52 per foot, while retail prices typically range from \$1 to \$6 per foot. Additional factors affecting cost include cable construction and rating. Indoor riser-rated cables are cheaper than plenum-rated cables designed for air-handling spaces, and armored or direct-burial cables for harsh environments can cost \$0.50 to \$5 per foot. Pre-terminated assemblies and patch cables are more expensive due to factory termination and connector types. For practical examples, a simple 1-core FTTH drop cable costs around \$0.13 per foot, while a 288-count optical fiber cable for building backbones can reach \$6 per foot or more. Single-mode cables, though more expensive upfront, allow longer-distance connections, whereas multimode cables are more cost-effective for shorter runs. In summary, the cost of a fiber optic strand depends on fiber type, strand count, cable construction, and purchase method, with typical prices ranging from \$0.09 to \$6 per foot, making it important to consider project requirements and installation environment when budgeting.
