

Price of Segmented Optical Cable

Article Overview

Segmented optical cable prices typically range from \$0.10 to \$6 per foot depending on fiber type, strand count, and construction.

Pricing Overview

The cost of segmented optical cables varies widely based on fiber type, strand count, and cable construction. For single-mode fiber, prices generally range from \$0.10 to \$0.50 per foot, while multimode fiber can cost \$0.30 to \$1.00 per foot. Higher strand counts increase costs proportionally; for example, a 12-strand cable may cost around \$0.50 per foot, whereas a 24-strand cable can reach \$1.00 per foot. Large backbone cables, such as 288-count optical fiber, can cost \$6 per foot or more .

Factors Affecting Price

- **Fiber Type and Core Material:** Single-mode fibers are preferred for long-distance, high-speed transmission and are generally more expensive than multimode fibers. Glass fiber cores offer superior performance but cost more than plastic optical fibers .
- **Cable Construction:** Indoor riser-rated cables are cheaper than plenum-rated cables. Armored or direct-burial cables designed for harsh environments can range from \$0.50 to \$5 per foot .
- **Pre-Termination and Factory Assemblies:** Pre-terminated or segmented cables with connectors installed in the factory are more expensive upfront but reduce field labor costs significantly .
- **Market Trends:** Prices have surged in early 2026 due to supply constraints, particularly in China, where single-mode fiber prices increased from 18 RMB per kilometer in January to higher levels by March 2026
