

Price of a 100G Optical Amplifier

Article Overview

The price of a 100G semiconductor optical amplifier is approximately USD 2,499.

100G optical amplifiers, particularly SOA (Semiconductor Optical Amplifiers) operating in the 1310nm O-band, are designed to amplify high-speed optical signals for 100G transmission systems. These amplifiers support data rates up to 160Gb/s and can be used for booster amplification, pre-amplification, or multi-channel signal amplification in metro and regional networks . They typically offer output power up to 10dBm and support multiple operating modes such as ACC, APC, and AGC for stable performance .

Key Features

- Wavelength Range: 1260–1340nm (O-band) for compatibility with 100GBASE-LR4 and similar systems .
- Data Rate Support: Up to 160Gb/s, suitable for 10G, 40G, and 100G networks .
- Amplification Modes: ACC (automatic current control), APC (automatic power control), AGC (automatic gain control) for consistent signal quality .
- Output Power: Up to 10dBm, ensuring sufficient signal strength over long distances .
- Deployment Flexibility: Can be used in compact network nodes or space-constrained environments, avoiding costly fiber replacement or wavelength conversion .
