

# Price of electrical distribution boxes for construction floors

## Article Overview

Construction site electrical distribution boxes typically range from \$200 to \$1,500 per unit depending on capacity, material, and pre-wiring options.

### Cost Factors

**Material and Construction:** Distribution boxes for construction sites are commonly made from technopolymer, fiberglass, or steel, with fire-resistant and weatherproof properties. Outdoor-rated enclosures (IP65 or higher) and shock-resistant designs increase costs compared to indoor-rated units . **Capacity and Specifications:** Pricing varies with amperage (32A-63A), number of circuits, and three-phase vs single-phase configurations. Higher-capacity or multi-phase units suitable for heavy-duty construction equipment command higher prices . **Pre-Wiring and Assembly:** Pre-wired boards, such as ENERGYBOX or BLOCK series, reduce on-site labor but increase upfront costs. These units are designed for easy wall-mounting or floor installation, and can be reused across multiple sites, offering long-term savings . **Installation and Labor:** Floor allocation involves mounting, securing, and connecting to the main power supply, which adds labor costs. Labor rates vary by region and project complexity, and may include conduit routing, breaker installation, and safety compliance . **Customization and Safety Features:** Additional features like padlocks, internal doors, surge protection, and digital monitoring can increase unit costs but improve safety and operational efficiency .
