

Price of high-quality optical fiber traction belt

Article Overview

High-quality optical fiber traction belts typically range from \$50 to \$200 per unit, depending on specifications, materials, and customization options.

Overview

High-quality optical fiber traction belts are essential for safe and efficient fiber optic cable installation. They are usually made from high-strength, wear-resistant materials such as neoprene rubber with an aramid nylon core for tensile reinforcement, ensuring durability and resistance to stretching. These belts are designed to provide stable and uniform traction, preventing fiber breakage or bending during installation.

Factors Affecting Price

- **Material Quality:** Belts made from virgin neoprene and reinforced with aramid fibers are more expensive due to superior durability and abrasion resistance.
- **Customization:** Grooved surfaces (V-grooves or U-shaped) or specific lengths and widths can increase cost.
- **OEM/ODM Services:** Custom-designed belts from manufacturers offering OEM/ODM services may cost more but ensure compatibility with specific traction machines.
- **Bulk Orders:** Purchasing in bulk from Chinese manufacturers or wholesale distributors can significantly reduce per-unit cost.
