

Price of installing a double-layer electrical distribution box in a household

Article Overview

Installing a double-layer electrical distribution box for a home typically costs between \$800 and \$2,500, depending on box size, amperage, labor, and additional safety features.

Material Costs

The price of a double-layer (or dual-tier) distribution box depends on its amperage rating, number of circuits, and construction material. Standard residential panels range from \$200 to \$1,000 for the box itself, with higher-end models featuring advanced safety features, weatherproofing, or smart monitoring systems costing more. Each breaker space may add around \$5 per slot, and larger panels with more circuits naturally increase the material cost.

Labor and Installation Costs

Labor is a significant portion of the total cost. For a typical home installation, electricians charge \$85–\$100 per hour, and a double-layer panel installation usually takes 3–6 hours, depending on wiring complexity and accessibility. This results in labor costs of approximately \$255–\$600. Additional work, such as running new circuits, installing AFCI/GFCI protection, or relocating the panel, can increase labor costs by \$150–\$500.
