

Procurement of Corrosion-Resistant Cable Trays in South Africa

Article Overview

Corrosion-resistant cable trays in South Africa are available in stainless steel, FRP, galvanized steel, and aluminum, suitable for industrial, commercial, and outdoor applications.

Material Options and Corrosion Resistance

- **Stainless Steel Trays:** Stainless steel, including 304 and 316 grades, offers superior corrosion resistance, making it ideal for aggressive environments such as marine, chemical, or industrial settings. Wire mesh and perforated designs provide excellent airflow and prevent cable overheating while maintaining durability and low maintenance requirements (Steelcraft, Advanced Strut) .
- **Fiber Reinforced Plastic (FRP) Trays:** FRP trays are lightweight, electrically non-conductive, and highly resistant to corrosion, chemicals, moisture, and UV exposure. They are suitable for outdoor installations, power plants, and industrial environments where electrical safety and minimal maintenance are priorities. FRP trays come in perforated, solid bottom, ladder, and wire mesh types (Saar Industries) .
- **Galvanized Steel and Aluminum Trays:** Pre-galvanized or hot-dip galvanized steel provides moderate to high corrosion resistance, suitable for indoor and mildly corrosive environments. Aluminum trays are lightweight and corrosion-resistant, often used in commercial and utility applications (Baobab Metal Systems, Advanced Strut) .
