

Router fiber optic cable has a red light

Article Overview

A red light on a fiber optic router usually indicates a Loss of Signal (LOS), meaning the router or ONT is not receiving the optical signal from your ISP.

What the Red Light Means

The red LOS light signals that your fiber connection is disrupted, preventing your router from communicating with the ISP. This is different from Wi-Fi issues or slow speeds; it usually points to a physical or network-level problem with the fiber signal itself .

Common Causes

- Loose or improperly connected fiber cable: The fiber optic cable may not be fully seated in the WAN/ONT port, or the connector may be dirty .
- Fiber cable damage: Cuts, sharp bends, or crushed cables can interrupt the optical signal .
- ISP outage or maintenance: Temporary network interruptions from your service provider can trigger the red light .
- Router or ONT malfunction: Firmware issues, power fluctuations, or hardware faults can prevent the device from detecting the signal .

Troubleshooting Steps

- Check for local outages: Visit your ISP's website or social media pages to confirm if there is a service disruption .
- Inspect the fiber cable: Ensure the cable is undamaged, clean, and properly conne...
