

SC pigtail fiber is easy to plug and unplug

Overview

SC connectors are plastic push-pull type, and are keyed with a tab. A fiber optic pigtail is a short fiber cable with a connector on one end and bare fiber on the other. Common types include single-mode OS2, multimode OM3/OM4. Fiber pigtails are simple in appearance, yet essential in function. They are the bridge between fiber optic cables in the field and the equipment or patch panels that manage them. Fiber optic cable has gone through quite the evolution of connectors, and none of these connector styles are compatible with each. In enterprise campus networks where seamless connectivity and fast deployment are non-negotiable, the SC Multimode Fiber Pigtail (SC-MM) stands out as a reliable workhorse.
