

ST506 Interface

Overview

In the ST-506 interface, the drive connects to a controller card with two ribbon cables carrying signals, while a third cable provides power. The ST-506 and ST-412 (sometimes written ST506 and ST412) were early hard disk drives introduced by Seagate in 1980 and 1981 respectively, that later became construed as hard disk drive interfaces: the ST-506 disk interface and the ST-412 disk interface. Introduced in 1980, the ST-506 was. The ST506 disk interface (other common names: ST412, ST506/ST412, or often the misleading MFM disk) was introduced in 1980 by Seagate with the 5MB hard disk of the same name. Each disc surface employs one movable head to service 153/306 data tracks. Dick Winters, 101st AB 506 PIR CO. E, 1944 #25314 Star Spangled Banner - 1823-24 - Unique Provenance - 1st Ed. Since the microcontroller on the Gotek is 72 MHz, that leaves only 7 cycles to process a half-bitcell, or 14 cycles for full bitcell/data bit.
