

Samoa Dual Power Distribution Box Installation

Article Overview

Installing a dual power distribution box in Samoa requires licensed electricians, adherence to local regulations, and proper connection to main and sub-distribution circuits.

Overview

A dual power distribution box (DB box) allows for two separate outputs from a single main supply, providing flexibility for heavy loads, solar integration, or backup systems. Proper installation ensures safety, prevents short circuits, and maintains compliance with Samoa's electrical standards .

Steps for Installation

- Engage a Licensed Electrician In Samoa, all electrical wiring and distribution box installations must be performed by an EPC-licensed electrician. The electrician will also handle permit applications for new connections .
- Survey and Planning Conduct a survey of the existing electrical system, determine load requirements, and plan the placement of the main and sub-distribution boards. This step ensures the dual DB box can handle the expected current and short-circuit levels .
- Obtain Permits The licensed electrician applies for a new connection permit at the EPC office. You must accompany them, provide identification, and sign the application form. Fees are \$50 for single-phase and \$100 for three-phase connections
