

Semi-enclosed distribution box

Article Overview

A semi-enclosed distribution box is a protective housing for electrical or signal distribution that offers partial enclosure, combining accessibility with protection against dust, moisture, and mechanical impact.

Definition and Purpose

A semi-enclosed distribution box is designed to house electrical components, power distribution modules, or signal terminals while providing partial protection. Unlike fully enclosed boxes, it allows easier access for maintenance, inspection, or modular expansion, making it suitable for industrial, commercial, and building automation applications. These boxes are often used for decentralized energy distribution, signal transmission, and control systems .

Materials and Construction

Semi-enclosed distribution boxes are typically made from high-strength ABS, polycarbonate, or metal such as aluminium or stainless steel . These materials provide impact resistance, chemical resistance, and durability in harsh environments. Many boxes feature hinged or quick-release covers, knockouts for cable entry, and modular internal mounting options for DIN rails or terminal blocks .

Protection Ratings

These boxes often comply with IP65 to IP67 standards, ensuring protection against dust and water ingress . Some industrial variants, like the Ex d series, are flamepro...
