

Setting up a TP-Link fiber optic connection to the router

Article Overview

You can set up your TP-Link router for fiber optic internet by connecting it to your ONT, configuring the WAN settings, and securing your Wi-Fi network.

Step 1: Connect the Hardware

- Locate your Optical Network Terminal (ONT) provided by your ISP. This device converts the fiber optic signal into Ethernet for your router .
- Connect the fiber optic cable from the wall outlet to the ONT's input port and power on the ONT .
- Link the ONT to your TP-Link router using an Ethernet cable. Plug one end into the ONT's Ethernet port and the other into the router's WAN port .
- Power on your TP-Link router and wait for the indicator lights to stabilize.

Step 2: Access the Router Admin Panel

- Connect a computer to the router via Ethernet or Wi-Fi.
- Open a web browser and enter the router's IP address, typically 192.168.0.1 or 192.168.1.1, or use <http://tplinkwifi.net> .
- Log in using the default credentials: username: admin and password: admin.

Step 3: Configure Internet Settings

- Navigate to the Internet/WAN settings section.
- Select the connection type provided by your ISP, often DHCP or PPPoE. For PPPoE, enter the username and password supplied by your ISP .
- Save the settings and check that the router obtains an IP address from the ONT....
