

Single-mode 24-inch optical cable

Article Overview

A single-mode 24-core optical cable provides high-bandwidth, long-distance data transmission with options for single-tube or loose-tube designs, armored protection, and flexible installation for indoor and outdoor networks.

Key Features

Core and Fiber Type: The cable contains 24 single-mode fibers with a core-to-core diameter of 9/125 μ m, optimized for long-distance, high-speed data transmission with low splice and insertion loss . **Design Options:**

- **Single-Tube Steel Armored:** Offers robust protection against mechanical damage and environmental factors, ideal for critical infrastructure and industrial networks .
- **Loose-Tube Gel-Free:** Designed for outdoor or duct installations, the loose-tube structure isolates fibers from stress during installation and environmental changes, while water-blocking materials prevent moisture ingress .

- **Self-Supporting ADSS:** Some single-tube designs allow pole-to-pole spans without additional support wires, reducing installation complexity and cost . **Jacket and Sheathing:** Available in various materials such as PVC, LSZH, OFNR, and OFNP, allowing customization for indoor, outdoor, or harsh environmental conditions .

Performance: Single-mode fibers ensure high data transfer rates, long-range transmission, and reliable signal integrity, making them suitable for telecommunications, data centers, CCTV systems, and industrial networks .

Installation Considerations:

- Armored cables are preferred for areas with potential rodent activity or mechanical stress....
