

Specifications and models of lighting distribution boxes

Article Overview

Lighting distribution boxes are electrical panels designed to safely distribute power to lighting circuits, available in various models and specifications for residential, commercial, and industrial applications.

Key Specifications

Voltage and Frequency: Most lighting distribution boxes operate at low voltage, typically 220–380V AC, with standard frequencies of 50Hz or 60Hz depending on the region and application . **Current Rating:** Boxes are rated for specific current capacities, commonly ranging from 16A to 63A for single-phase systems, and higher for three-phase industrial setups . **Protection Features:** They include circuit breakers, fuses, and residual current devices (RCDs) to prevent overloads, short circuits, and electric shocks . **Material and Enclosure:** Distribution boxes can be made of plastic or metal, with protection levels (IP ratings) suitable for indoor or outdoor use. Plastic boxes are common for residential lighting, while metal enclosures are preferred in industrial environments . **Mounting Type:** Options include flush-mounted (inside walls) and surface-mounted (on wall surfaces) installations .

Common Models

Low-Voltage Fixed Switchgear:

- GGD Series: High breaking capacity, stable performance, used in substations and...
