

Specifications of professional steel cable trays in China and Africa

Article Overview

Professional steel cable trays in China and Africa are designed to meet industrial and commercial standards, with variations in materials, load capacities, and compliance with international norms such as IEC 61537.

Chinese Steel Cable Tray Specifications

Materials and Construction: Chinese cable trays are commonly made from galvanized steel, stainless steel, or aluminum, with surface treatments like hot-dip galvanization for corrosion resistance, especially in outdoor or harsh environments . Stainless steel trays are highly durable, resistant to moisture, chemicals, and UV exposure, making them suitable for food processing, chemical plants, and marine applications .

Types of Trays:

- **Ladder-type trays:** Feature side rails connected by transverse rungs, ideal for heavy cable loads in industrial plants, power stations, and oil & gas facilities .
- **Solid-bottom trays:** Provide full under-cable protection, suitable for environments with contamination or moisture, such as chemical or pharmaceutical facilities .
- **Wire mesh trays:** Open-grid design for maximum airflow and easy cable access, commonly used in data centers, telecom rooms, and IT infrastructure .
- **U-channel trays:** Single open side with a closed back, allowing secure cable retention in tight spaces, often used in commercial buildings and HVAC systems .

Dimensions and Load Capacity: Chinese manufacturers offer trays up to 3000mm in length, with customizable widths and depths to accommodate different cable volum...
